## TERiX ANNOUNCES FREE DAYLIGHT SAVING TIME SOLARIS™ SOLUTION

Sunnyvale, CA—January 22, 2007— TERiX today announces it will offer on its website a “free-of-charge” Day Light Saving Time (DST) public domain solution to the SUN Microsystems™ (SUNW-NASDAQ) Solaris™ user community running versions 2.5.1, 2.6 and 2.7 legacy operating systems.

With the advent of new DST dates beginning March 11 this year, Solaris™ users require a software patch in order for the operating system to correctly calculate the time change. While Sun™ provides a public patch for Solaris 8, 9 and 10, no free public patch was available for legacy versions of Solaris™ until today. TERiX created the DST patch for its clients running versions of Solaris™ no longer supported by the manufacturer, then decided to release the free patch into public domain as a service to the Solaris™ user community.

“The entire Solaris™ community deserves a free DST patch and TERiX is delighted to provide it. TERiX has been in support of open systems and open source initiatives in the UNIX community for a decade and this announcement is just another example of our commitment in support of the greater Sun™ user community,” stated Bernd Appleby, Chief Executive Officer at TERiX. “Our actions clearly support our Better Service-- Better Value commitment to our customers and the industry,” Appleby added. IT Director Ian Waters states, “The TERiX DST patch is created using the same public domain resources and methodologies used by the manufacturer to write the DST patches for Solaris™ 8, 9 and 10. We are happy to assist the Solaris™ user community by packaging the publicly available time zone data and software as well as the necessary information to implement it”. Larry Quinn, Director of Sales commented further, “TERiX will make the DST patch and installation instructions available to anyone at no charge. Customers may engage TERiX professional services to assist in implementing the patch, if needed. We want to be a part of the solution for our base of customers and the user community that have come to see us as a trusted advisor”.

TERiX provides a comprehensive range of custom and standardized hardware and software maintenance and service options in support of Sun™, IBM™, HP™ UNIX-based servers, Windows servers, SAN and NAS storage systems. TERiX supports and maintains over 850 customers in the United States and abroad and its clients include Fortune 500 companies in industries as diverse as aerospace, telecom, banking, technology, public sector, manufacturing and finance. TERiX is a privately held company whose web address is [www.TERiX.com](http://www.TERiX.com).
