TERiX FREE DST SOLUTION SHEDS LIGHT ON TIME ISSUE

Sunnyvale, CA—February 26, 2007—With over 8,000 server downloads from customers, manufacturers, system integrators, business owners and the general public that run legacy version Sun Microsystems™ (NASDAQ:SUNW) Solaris™ 2.51, 2.6 and 2.7 in the past 30 days – TERiX Free Daylight Saving Time (DST) Solution download page has proven to be very popular spot on the internet.

“The US is adopting a new Daylight Saving Time (DST) schedule on March 11, 2007, giving the country and extra four weeks with the clocks forward an hour for energy saving reasons”, Todd Weiss of Computerworld commented in a recent article on the issue. In two February 2007 articles from Mr. Weiss, he noted the progress and policy of several major IT vendors as they ready patches and assistance for customers.

“To date, TERiX free public downloads show over 8,000 servers registered for the TERiX DST Solution and the comments from customers and partners have been extremely positive”, stated James Olding, Executive Vice President at TERiX. “We have had specific public safety and financial services customers comment that our open source solution gave them a tremendous head start on tackling the DST issue in their environment. It’s a good feeling to know that we have been of assistance to the user community”, Olding further stated.

Sun Microsystems™ has made available public Daylight Saving Time (DST) patches for its more current versions of Solaris™ operating system (Solaris™ 8, 9 and 10) but had commented to Computerworld and other sources that a \$400 per server, time and materials charge, must be paid for the Solaris™ 2.51, 2.6 and 2.7 DST patch from Sun™. The DST issue is a prime example of how Third Parties add value and options for the customer in the Sun™ ecosystem. Having support solutions for systems whose OEM service life has ended provides investment protection.

“The open source TERiX DST solution has created quite a stir”, stated Larry Quinn, TERiX Director of Sales. “As the deadline of March 11 approaches, we are seeing the number of registrations and server downloads grow exponentially each day”, Quinn further stated.

TERiX provides a comprehensive range of custom and standardized hardware and software maintenance and service options in support of Sun™, IBM™, HP™, and SGI™ Unix-based servers, Windows servers and SAN and NAS storage systems. TERiX serves over 850 customers in the United States and abroad and its clients include Fortune 500 companies in industries as diverse as aerospace, telecom, banking, technology, public sector, manufacturing and finance. TERiX is a privately held company whose web address is www.TERiX.com.
