Whitepapers: Third Party Maintenance Value

Sunnyvale, CA—July 31, 2007—Now in its 10th anniversary year, with growth in Period 1 ending June 30, 2007, nearly doubling previous period revenues, TERiX's Better Service... Better Value proposition in the marketplace is being received—loud and clear. TERiX today announced the availability of a whitepaper download section on its website at www.TERiX.com, which may hold some of the reasons for the popularity of TERiX support. TERiX has captured several large support contract wins for clients in recent months, some with thousands of Sun MicrosystemsTM (NASDAQ: SUNW) and IBMTM (NYSE: IBM) UNIX servers and storage systems.

“The maintenance and support marketplace is driven by the customer and their value chain, and the fact that some large equipment manufacturers and system integrators have not been addressing customer needs is evident in our most recent wins,” stated Larry Quinn, Director of Sales and Marketing at TERiX.

TERiX now serves some of the industry's most recognizable brands in nearly every vertical, including manufacturing, technology/internet, banking/finance, retail, telecommunications and government. Over the past 10 years, TERiX has grown at an average of 35% per year and has been profitable in each year. It is now offering UNIX hardware and operating systems support for major manufacturers and storage systems as well as hardware support for the Wintel/Blade industry standard servers market in the United States and 44 countries.

“Third party maintenance has long been an option for the data center, but what the customer seeks is not just financial savings, but risk mitigation and attention to detail. The customer wants it all—high touch, swift resolution, ultimate uptime, quality, and cost savings. Worldwide, this is where the TERiX solution is differentiated and what many customers are now validating in their services partner decisions,” Quinn further commented.

TERiX headquarters is located at 388 Oakmead Parkway, Sunnyvale, California; with Sales/Marketing/Alliances efforts led from its 5450 Frantz Road, Dublin, Ohio offices. TERiX provides a comprehensive range of custom and standardized hardware and software maintenance and service options in support of SunTM, IBMTM, HPTM, and SGITM Unix-based servers, Windows servers and SAN and NAS storage systems. TERiX serves more than 900 customers in the United States and abroad with over 35,000 data center servers and storage systems. TERiX is a privately held company whose web address is www.TERiX.com.
